Iridium Pilot[®]

100% global satellite
communication
Internet and voice

iridium®

The Iridium Pilot broadband service offers flexible and highly reliable data services at a reasonable price. You may choose from a variety of data and voice rates that can be combined in a number of ways according to your needs.

Iridium Pilot®

As a packet exchange service, the Iridium Pilot lowers your maritime communication costs compared to circuit exchange services. It also offers a wide variety of personalised voice and data plans according to your needs and budget, because if you don't use a service, you shouldn't have to pay for it.

Key benefits of the Iridium Pilot

- » Voice security, e-mail communication and ADSL Internet access anywhere in the world
- » Simultaneous use of the three voice lines and the data line
- » Global services programme
- » Easy to install

Communication savings

- » Prepaid solutions for crews
- » Personalised voice and data plans
- » Monthly plans
- » Balance alerts
- » Restricted access to calls through the use of a PIN
- » E-mail without monthly fees or licence/domain charges. Users pay for what they consume

Works in the most extreme conditions

The Iridium broadband service is not affected by extreme weather conditions. Many customers with critical mission communication requirements use Iridium as their platform back-up.

01 010

High quality communications

The Iridium satellite system is the only global provider of mobile satellite phone services that provides complete worldwide coverage.

- » Confidential and secure high-quality communication
- » Professional and high-quality voice equipment
- » International phone access to land and through e-mail
- » Spam-free e-mail (no junk mail)
- » Communication with vessels of all sizes and nationalities
- » Ability to receive and send information via email

True global coverage

- » Global coverage
- » Maintenance-free
- » No moving parts in antenna
- » Iridium satellite system

Comprehensive communication system

To offer users a complete service, we have developed a comprehensive communication system that includes a series of products.

- » Prepaid cards for satellite calls
- » Buzzer
- » Siren for outdoor areas
- » Loudspeakers for rooms
- » The siren and loudspeaker system may be configured according to the needs of each user

Robust, user-oriented design

It is manufactured using robust materials that are suitable for the marine environment in order to guarantee its durability. A product designed to be installed quickly and easily.

- » It features a buzzer and/or sirens so incoming call notifications may be heard throughout the ship
- » Complete e-mail management through an intuitive and easy-to-use graphic environment

Below deck unit

Height	7.78" (230 mm)
Widht	9.84" (250 mm)
Diameter	2.17" (55 mm)
Weight	2.98 lb (1.35 kg)

Antenna specifications

Height	9.06" (230 mm)
Diameter	22.44" (570 mm)
Weight	24.25 lb (11 kg)

Data

Up to 134 kbps two-way with the Iridium broadband service.

ACCESSORIES

We have designed these accessories to assist with on-board communications.

» Prepaid card
